

## MAS 90 · 200

## A New Generation of Sage Software's MAS 90 · 200

### Commitment to Customers

The mission of Sage Software is to help their customers manage and grow their businesses by being the leading provider of exceptional business management software and services, supported by a network of high-quality business partners. Over the last few years Sage has extended its commitment to its customers by developing its customer for life philosophy. That philosophy begins with MAS 90 · 200, Sage's anchor product. In September 2004 the CPA Technology Advisor described MAS 90 as "practical and well engineered, from its straightforward installation to its scalable database and migration options. It's easy to see why MAS 90 has such a large market share in the high-end accounting software arena [with over 70,000 installations]."

### Sage MAS 90 · 200 Version 4.X

In order to continue to satisfy its customers, and to introduce new technology, Sage has begun upgrading MAS 90 with the 4.x versions of the product. The 4.x series are the most significant releases of MAS 90 since the introduction of its Windows-based product in 1996. The new versions are packed with major enhancements designed to streamline accounting operations, make management reporting more responsive, and reduce the learning curve for new users. Sage has taken into account both customer and channel partner input when developing each of the 4.x upgrades that constitute a major overhaul of each module within the product. "With this release, we've added a number of customer-requested capabilities to the system, giving our customers more power to run their businesses smoothly and effectively, maximizing their ROI

and streamlining their operations,” a representative notes, “[MAS 90 4.0] provides our customers with increased efficiency through faster data entry, improved ease of use and additional insight with refined reporting capabilities.” The main focus of 4.x series thus far has been to upgrade General Ledger, Accounts Receivable, Sales Order, Bank Reconciliation and Return Merchandise Authorization. In addition to, providing security enhancements, adding reporting capabilities, including the new Business Insights Reporter, which allows customers to create custom reports more easily, and to introduce new technologies making it easier for integration and future enhancements. Essentially, Sage is reengineering the underlying data in the system, and making it COM compliant. This Business Object Interface enables channel partners to easily integrate and customize MAS 90

without modifying the underlying source code of the application. With its redesign of the software Sage has followed the same philosophy that they did when they upgraded MAS 90 from DOS to Windows: do not disrupt the customer's business. Sage has engineered the product to run the new modules along side of the old, in a way which is virtually undetectable to the customer.

### Integration with Other Sage Products

In addition to updating MAS 90's modules, Sage has also continued to provide integration with its other compatible products, including: FAS (Fixed Assets), Abra HRMS and their CRM products, Act , Sage CRM and SalesLogix. Furthermore, Sage

acquired one of its largest master developers and now has hundreds of “Extended Solutions” that they now support.

### The Future of MAS 90 · 200 - 4.2

Building on the momentum of versions 4.0 and 4.1, Sage will release version 4.2 by early 2007 with will apply the new Business Framework to Accounts Payable and add the much anticipated Business Insights Explore module. They will continue the redesign until every module has been upgraded.
